BUILDING

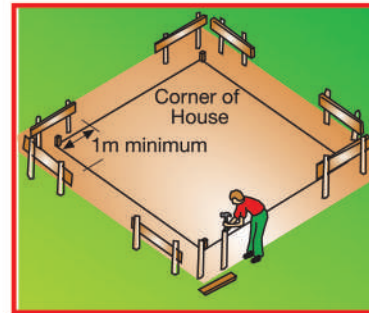

SCAN TO DOWNLOAD

Correct marking of the foundations for new walls is important to ensure that foundations are the right size and in the correct position to take the load of the wall. Good foundations are important to ensure that no movement can take place, any movement will result in cracks and problems in the building that the foundation supports.

TOOLS REQUIRED

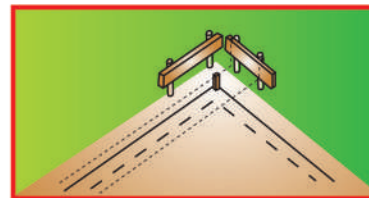

- Spirit Level
- Builders Line
- Spade
- Hammer
- Square
- Compactor
- Brick Course Gauge
- Wooden/Aluminium Straight Edge
- Wheelbarrow
- Pick

STEP 1

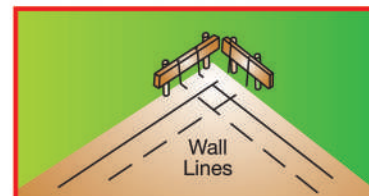

After marking out the walls of the house, put pegs in the ground 1 meter away from the house marking. Nail a piece of wood horizontally across the pegs. This will be used to mark the foundations.

STEP 2

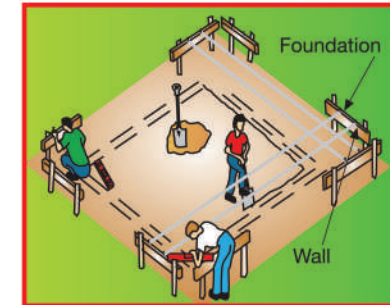

With builders line, mark the position of the foundations (normally 600mm wide for domestic houses). Fix nails in the timber for each side of the foundation. Stretch builders line from one marking frame to the next.

STEP 3

Mark the wall lines with nails and builders line in the same way, ensuring that the wall lies in the centre of the foundation.

STEP 4

Mark the line of foundation on the ground with a spade, using the foundation lines as a reference. This can also be done using a line of cement to mark the foundation position.

STEP 5

Remove the lines and start digging the foundations.
